[Jura Capresso Impressa S9 Coffee Machine Makes Space Ships Look Dull](#)

The most versatile One Touch automatic coffee machine for residential use

Coffee makers were first seen as machines that would kill the art of making coffee. However, now every kitchen has a coffee maker that the user swears by. Over the recent few years, these home appliances have evolved technologically, just like any other device available, now offering truly complex features, ingenious designs and increased usefulness.

The Impressa S9 One Touch coffee machine by Jura Capresso is one of the most versatile automatic coffee centers available for residential market today. Its unique One Touch technology lets you make cappuccino, cafe mocha, latte or latte macchiato with the simple touch of a button. You don't even have to move the cup. Equipped with 18 bar power pumps, S9 does everything - grinding, tamping and brewing in a matter of seconds. You can choose from one or two cups at a time, $\frac{1}{2}$ to 16 ounces. And since Jura incorporated two stainless steel-lined ThermoBlock heating systems and large, 96 ounce water tank capacity, you can also get any espresso-based and frothed milk drinks with no down time. The Impressa S9 is completely programmable, including temperature, coffee volume and strength, and offers a separate coffee funnel for ground coffee and a hot water dispenser for Cafe Americano or tea. It comes with a commercial grade, sound insulated solid steel conical burr grinder that has six fineness settings, and a 10 ounce bean container. A large cup warming platform pre-warms your cups. The coffee machine also sports a two-line Alpha/Graphic LED display with graphics bar to indicate progress of the brewing process. The Impressa S9 One Touch can be set to seven different languages, displays cup size and time in European and American formats, keeps track of all activities and can be set to turn on and off automatically. Moreover, it features automated cleaning programs, including integrated cappuccino rinsing and cleaning cycles. All settings and activities are permanently stored in its built-in memory system. As you might expect, the Impressa S9 doesn't come cheap, selling for 2,400 US dollars.

We are just a few, but there are many of you, Softpedia users, out there. That's why we thought it would be a good idea to create an email address for you to help us a little in finding gadgets we missed. Interesting links are bound to be posted with recognition going mainly to those who submit. The address is .
