Let there be light
50cycles

Nuke Light May Be Everything Cyclists Need

And a pretty cheap Christmas gift too

You know, with Christmas coming and all, we need to think about stocking up on gifts, from the more expensive gifts for our wives, girlfriends, secretaries or female neighbors to less expensive ones for that relative that you never liked but seems to always come by at Christmas in order to bring you warm thoughts. I mean, you've conspired to kill each other every other day of the year, you could at least be civil at Christmas.

And because running him or her down with your car at night might seem less satisfying if he or she didn't have a warning light attached to his or her bike, you could offer her or him the new Nuke Light from 50cycles. The Nuke Light is the perfect Christmas gift for cycle commuters and off-road mountain bike riders. Of course, it can also be used by military and security personnel or campers as well. USB rechargeable and extremely portable, the Nuke Light emits a maximum luminous flux of 130 lumens or up to 540 lumens within 1 meter.

It features four-step adjustable brightness and two modes: continuous and flashing. As far as battery life is concerned, at maximum intensity, it will last you for 3 hours and 20 minutes, while minimum intensity is guaranteed to offer you a lifetime of 15 hours. Going for the flashing SOS mode will keep it alive for 40 hours. It is water resistant and... like I mentioned before, it can be charged via USB or an AC adapter.

At 320mA, it has a maximum lifespan of 50,000 hours. It comes with a cycle mounting bracket and weighs only 150G. If you're curious about pricing, it can be yours for 42.56 Euros or about 70 dollars if you live in the US.

We are just a few, but there are many of you, Softpedia users, out there. That's why we thought it would be a good idea to create an email address for you to help us a little in finding gadgets we missed. Interesting links are bound to be posted with recognition going mainly to those who submit. The address is .
