Spark Nano Offers Military-Grade GPS Tracking for Consumer Market

Or that's what its manufacturer, Lightning GPS, claims

Over time, the number of GPS tracking devices that have made their way to the market has increased a lot, whether we're talking about certain gadgets whose main purpose is to help users find their way towards their desired destination or simply track their whereabouts at any given moment. And that's exactly the case with the particular device you're about to see as follows, namely the Spark Nano from Lightning GPS, which is allegedly capable of providing military-grade GPS tracking to the consumer market.

The manufacturer is a rather well-known provider of covert GPS tracking devices for Police Departments, the Military, and DHS, and the "Spark Nano" is its first important venture into the field of consumer electronics. According to Jason Lazarus, VP of Research and Development for Lightning GPS, the launch of such a product was triggered by overwhelming demand from customers. "Everyday we field desperate calls from parents who are begging us for implantable GPS Trackers that they can use to track their family members," states Mr. Lazarus, adding that "there is a very real demand for this technology that is just not yet available to the public."

Featuring a very small form-factor (about the size of a 9-Volt battery), the Spark Nano GPS Tracker has a strong appeal with everyone from parents to Professional Investigators who desire stealth tracking, especially since it also has a rugged, waterproof build.

The device incorporates a Panic Button, whose main purpose is to turn this tiny GPS Tracker into a personal safety beacon that alerts people when the wearer feels he/she is in danger, pointing out exactly where he/she can be found. Plus, it supports geo-fencing, and can be used for sending out alerts via the Internet, while its built-in battery will work for around five days non stop.

The Lightning GPS Spark Nano is available for 300 US dollars, and if you think that this is too expensive, just wait and take a look at the service plan: from $49.95 per month, with the panic button service a $5 extra.

We are just a few, but there are many of you, Softpedia users, out there. That's why we thought it would be a good idea to create an email address for you to help us a little in finding gadgets we missed. Interesting links are bound to be posted with recognition going mainly to those who submit. The address is .
